☒ Counties ☐ Others

☐ School Districts ☐ WTCS Districts

Fund Sources Affected

☐ GPR ☐ FED ☒ PRO ☐ PRS ☐ SEG ☐ SEG-S

Affected Chapter 20 Appropriations

Assumptions Used in Arriving at Fiscal Estimate

Bill Summary:

The revisions to NR 445 increase the number of toxic substances regulated, adjust the emission thresholds for some previously regulated substances, and make substantial changes in the rule that reduce regulatory burdens to incidental emitters, provide compliance alternatives for some emitters, and clarify administrative requirements to show compliance with the rule.

A few provisions in the proposed revisions will affect state and local government owned sources of air pollution. The most significant changes that may affect state or local government owned sources include: 1) Setting emission limits for coal dust. This provision may affect state-owned boilers that burn coal as well as the Manitowoc Public Utility. 2) Setting requirements to reduce particulates emitted from diesel generators. Units that burn significant amounts of diesel fuel may be required to make modifications. Diesel-powered generators that only provide limited emergency power are not expected to be required to make any modifications. Diesel-powered generators at county highway departments may be required to make modifications. 3) Additional regulated hazardous air pollutants. Among the sources reporting the largest number of hazardous air pollutants are municipally-owned waste water treatment plants. These facilities may incur some small additional administrative costs associated with verifying compliance with the expanded hazardous air pollutants list.

There are two minor revisions included in this rule package. The first removes perchloroethylene from the state list of Volatile Organic Compounds that contribute to ozone formation. There is no fiscal impact from this revision. The second increases the emission cap that is used to assess emission fees at a facility. This revision is being done to bring the department's administrative rules into agreement with the change in the emissions fee cap that was passed by the Legislature. The Legislature increased the emissions fee cap to increase segregated fees for the air program.

Long-Range Fiscal Implications

none

Assumptions Used in Arriving at Fiscal Estimate – Continued

Fiscal Estimate:

The revisions will affect permit writing and compliance activities. Provisions in the rule will increase some activities and reduce other activities. No additional FTEs are expected to be needed in the Bureau of Air Management or in the regional offices.

The rule revisions may affect a number of state and locally owned facilities. State and locally owned emission units that are out of compliance with new emission limits may incur some compliance costs. Compliance costs are expected to be insignificant for most state and locally owned facilities. These costs are unquantifiable.
